I've been trying to print an envelope from the envelope feeder on an HP OfficeJet but it always gets the orientation wrong. I'm using FC4, the latest HP drivers and the latest version of OpenOffice. I've tried both portrait and landscape mode, it makes no difference. I have no trouble doing it from Word on Win4Lin but I'd like to be able to do it from a native Linux app.

I managed to get my Epson R200 to print envelopes using OO and Cups, but I had to create a special document (custom size) to do it. It is a PITA but it works.

HTH, YMMV, LSMFT

Dave
