Thanks for your answer.

I tried 1 and 3.

If I do strace lsusb, some of the last lines of the output when it freezes are:

```
close(3) = 0
open("/proc/bus/usb/002/001", O_RDWR) = 3
ioctl(3, USBDEVFS_IOCTL, 0xbfad59e0) = 3
close(3) = 0
open("/proc/bus/usb/001", O_RDONLY|O_NONBLOCK|O_LARGEFILE|O_DIRECTORY)
= 3
fstat64(3, {st_mode=S_IFDIR|0555, st_size=0, ...}) = 0
fcntl64(3, F_SETFD, FD_CLOEXEC) = 0
getdents(3, /* 5 entries */, 4096) = 80
open("/proc/bus/usb/001/004", O_RDWR) = 4
ioctl(4, USBDEVFS_CONNECTINFO, 0xbfad3974) = 0
read(4, "\22\1\0\2\0\0\0@\264\0040h\1\0008Nd\1", 18) = 18
read(4, "\t\2 \0\1\1\0\300", 8) = 8
read(4, "\0\t\4\0\0\2\10\6P\0\7\5\2\2\0\2\0\7\5\206\2\0\2\0", 24) = 24
close(4) = 0
open("/proc/bus/usb/001/002", O_RDWR) = 4
ioctl(4, USBDEVFS_CONNECTINFO
```

so it stops there. It is maybe that it has problems to connect with the device ?

Thanks.

Re: Bluetooth and usb dongle belkin

SO what could be the cause of lusb hanging in my system ?

"Could" can be many things. Just to name a few off the top of my head:

1) You're getting nailed by a kernel bug

2) Some of your system libraries are corrupted

3) It's possible that your USB dongle is defective, and is hanging/hogging the USB bus. Something occasionally gets loose over here also. I guess that vibration from spinning hard drives and fans occasionally works loose the contact between my Belkin dongle and the USB port becomes intermittent, and I need to take it out and jam it back in, before it comes back alive. Last week the stupid dongle somehow was flooding my system with hardware interrupts. The symptoms were rather bizarre (the system was sluggish, and "top" showed me a constant load of 1.00 even though nothing was ru
