Dear Peter,

Much in the same way that you should not be doing certain things, I do think you should look into installing a copy of Ethereal (<http://www.ethereal.org/>) and then sniff their traffic. Typical pointy haired bosses probably have nothing better to do than look at whatever others are doing (and that thing called 'manage', whatever that truly is) and plan where to take 'clients' with their families to which restaurants.

<moment_of_clarity>
this is not alt.sysadmin.recovery is it?
</moment_of_clarity>

As others have said, do not download stuff you should not be downloading at work, unless you know how to hide things, *cough* ssh tunnels *cough* port 443 *cough*

Regards

Alex
