

DHCP Address Problem

Just did a fresh install of LM 9.1, same problem as every other time I've done a clean install, I can't remember how to fix it (actually it seems to fix itself). Install goes well, detects my 3c905 card ok, but will not pull a DHCP assigned address. Once booted, I can run dhclient or dhcpd and get one just fine, so the card seems to be working well. I also boot WinXP, Gentoo 1.4 and Lindows with no problem, so it seems to be a Mandrake 9.1 issue. I've run the network wizard in MCC a hundred times (OK maybe I'm exaggerating a bit) and even linuxconf shows the correct info already (it knows the dns servers too). I've also toggled Pnp in BIOS with no changes. I'm stumped, any ideas are appreciated. Thanks!
