```
uname -a
Linux .... 2.6.15-1.2054_FC5 #1 Tue Mar 14 15:48:33 EST 2006 i686 i686
i386 GNU/Linux
```

I have installed ProFTPd on Fedora linux following the directions at:  
[http://www.howtoforge.com/perfect\\_setup\\_fedora\\_core\\_4\\_p5](http://www.howtoforge.com/perfect_setup_fedora_core_4_p5)

```
yum install proftpd
chkconfig --levels 235 proftpd on
/etc/init.d/proftpd start
```

Then created the file /etc/pam.d/ftp with the following content:

```
##PAM-1.0
auth required pam_unix.so nullok
account required pam_unix.so
session required pam_unix.so
```

then ran /etc/init.d/proftpd restart

Then from Windows XP command line I get this

```
P:\>ftp 10.3.2.176
Connected to 10.3.2.176.
220 FTP Server ready.
User (10.3.2.176:(none)): myname
331 Password required for myname.
Password:
530 Login incorrect.
Login failed.
ftp>
```

It's not a case of incorrect password. It does this with all accounts including root.

Is there some other file I need to edit to allow FTP in, or change permissions somewhere?

## ProFTD on Fedora Linux

Also I want the users to ftp directly into their home directory,  
/home/myname

How do I do this?

thanx

Roger McCarrick
