Running Debian etch, and since getting AT&T Uverse service, I cannot connect my T30 wirelessly to the "Gateway" – a combo modem, router – SSID 2wire341. I've tried w/ and w/o WEP, used different channels, auto channel – I keep getting "No DHCPOFFERS received" from the Gateway. I am pretty sure the set-up's OK on the T30 end, and don't know what else to fool with on the Gateway. A Windows machine and an iphone do wireless automagically.

The bad news is at <http://rafb.net/p/xpwPCb36.html>. If anyone else here has Uverse and successfully set up wireless from Linux, I'm all ears.

i would say edit resolv.conf
let it look like this :

```
nameserver yourispdnserver  
nameserver 192.168.0.1
```

cheers,

zaher el siddik
