Hi all,

I got totem-xine installed onto my 600 Mhz iBook running ppc Ubuntu Linux.

It took the following deb packages to be installed before it would allow me to install totem-xine:

```
libgpg-error0_1.0-1_powerpc.deb  
libdvdcss2_1.2.8-0.0_powerpc.deb  
libopenjdk8_0.5.5-8_powerpc.deb  
libdvdplay0_1.0.1-6_powerpc.deb  
libstartup-notification0_0.7-1_powerpc.deb  
libcrypt11_1.2.0-4_powerpc.deb  
libtasn1-2_0.2.10-3_powerpc.deb  
libcrypt7_1.1.90-9_powerpc.deb  
libgnutls11_1.0.16-9_powerpc.deb  
totem-xine_0.99.16-1_powerpc.deb
```

dpkg also required me to uninstall totem-gstreamer.

However the DVD video and audio playback is very choppy. But it did play. I'm wondering if the code isn't optimized enough to play video. I know that DVDs played fine when OS 9 was installed on this computer.

Any suggestions would be great.
