Hi

I Just installed a app called bluphone to make use of my bluetooth an cellphone.

Instaletin went fine, but starting up the app is not easy, it keeps crashing.

The debug info did not help me much, but there might be someone out there that can read the debug info a bit bether the i.

So if anyone could tell me whats wrong ill be a happy camper!!

Backtrace was generated from '/usr/local/bin/bluephone'

```
Using host libthread_db library "/lib/tls/libthread_db.so.1".
`system-supplied DSO at 0xffffe000' has disappeared; keeping its symbols.
[Thread debugging using libthread_db enabled]
