Here is the file: XF86Config

File generated by XConfigurator.

Refer to the XF86Config(4/5) man page for details about the format
of
this file.

Files section. This allows default font and rgb paths to be set

Section "Files"

The location of the RGB database. Note, this is the name of the
file minus the extension (like ".txt" or ".db"). There is normally
no need to change the default.

 RgbPath "/usr/X11R6/lib/X11/rgb"

Multiple FontPath entries are allowed (they are concatenated
together)
By default, Red Hat 6.0 and later now use a font server independent
of
the X server to render fonts.

 FontPath "unix:/7100"

EndSection

Server flags section.

Section "ServerFlags"

```
# Uncomment this to cause a core dump at the spot where a signal

To customise the XKB settings to suit your keyboard, modify the
lines below (which are the defaults). For example, for a non-U.S.
keyboard, you will probably want to use:

XkbModel "pc102"

If you have a US Microsoft Natural keyboard, you can use:

XkbModel "microsoft"

#

Then to change the language, change the Layout setting.

For example, a german layout can be obtained with:

XkbLayout "de"

or:

XkbLayout "de"

XkbVariant "nodeadkeys"

#

If you'd like to switch the positions of your capslock and

control keys, use:

XkbOptions "ctrl:swpcaps"

These are the default XKB settings for XFree86

XkbRules "xfree86"

XkbModel "pc101"

# This is a set of standard mode timings. Modes that are out of
monitor spec
# are automatically deleted by the server (provided the HorizSync and
# VertRefresh lines are correct), so there's no immediate need to
# delete mode timings (unless particular mode timings don't work on
your
