Have you priced 600GB ide drives?

Having a pair of 300GB drives is a hell of a lot cheaper.  
twice the storage

twice the performance

Only with multi-process access with light CPU loading, hope your benchmarks show you that get an advantage

one half the reliability

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

I think less than a half, as a striping error wipes both drives, but as long as the data is 'don't care if it disappears', who cares?

But trusting RAID0 to hold data in a windoze box, you're brave ;)

Grant.
