Ok I didn't notice... Do you (the OP) have a Windows machine available? There's a Windows version of sha1sum as this file:

<ftp://ftp.gnupg.org/gcrypt/binary/sha1sum.exe>

Why use such an awkward utility when MD5sum seems to do the same job, be more convenient, and available everywhere?

'MD5SUM' is not recognised as an internal or external command, operable program or batch file.

Re: fedora core 5 checksum

But 'md5sum' should be.

'md5sum' is not recognised as an internal or external command,
operable program or batch file.

Dave

there is no md5sum installed in Windows by default. md5sum and sha1sum
are the Linux names of the tools. Just like the OP has to go
to <ftp://ftp.gnupg.org/gcrypt/binary/sha1sum.exe> to get sha1sum.exe
you'd have to get md5sum.exe from somewhere and install it on your windows PC.
