hi all

i managed to do a graphical install of rh9 in presario 2100z laptop after x crashed couple of times as it couldnt detect my monitor. now my x doesnt start and says display device not found.i tried tinkering xfree86 config from

<http://www.linux-on-laptops.com/compaq.html>

it still doesnt work. my monitor is a radeon igp 320m.

plz help...

is there anylinux driver for this monitor.?

thanks
