Grub screen shows Windows as only option to boot up, it shows GRUB VERSION 0.95

when I go to edit Windows it gives me

```
rootnoverify (hd0,0)
chainloader +1
```

I have e for edit c for command o/O for open and d for remove.

I have two 40 Gig HD primary is for Windows 2000, 2nd one for Linux, is hda for primary correct?, my files shows vmlinuz-2.6.11-1.35-FC3 as Kernel

Any idea how to fix or add the Linux kernel to Grub for boot up

Thanks
