Dear ynotssor,

Sorry about posting the remarks, while in a hurry to send a reply i've made a mistake. Sorry again for that.

Regarding the other entries:

I've not done anything major changes for the file. I was using the file as is. From the installation file.

I even tried what said in a book Redhat 9.0 unleashed.

Nothing worked.

Is this may be a problem. My connection to the internet is a DDNS. But I've already spoken to them they say it is not a problem. Or do u think I may behaving any other problems with my NS records or something. But my ms Records say mail.mydomain.com

And hence I've no clue.

Any way i'll try ur suggestion and give u a posing with the results.

Regards

Shankar.
