Okay, I've finally decided to start shopping for a replacement for my 1998 Sony VAIO PII-233. I wonder if anyone would care to recommend a new laptop on which a clean install/configuration of Fedora Core 2 would be fairly smooth?

Is there a hardware compatibility document available for Fedora? I was not able to find one on [fedora.redhat.com](http://fedora.redhat.com), nor on a Google search.

Any insight or suggestions are appreciated.
