

webcal ics application setting

When I click on a webcal://xxxxxxxxx.ics link, the calendar gets subscribed in Evolution. Fine and dandy, but I want it subscribed in Sunbird, not Evolution.

How do I change the "webcal://" protocol from pointing to Evolution to point instead to Sunbird. I'm using KDE as my desktop, and Firefox as my browser, if that matters. I have already changed the ".ics" file association in KDE, but that is not affecting behavior when clicking on "webcal://" links.

TIA.....
