Hi!

Yesterday I installed Fedora Core 3 – everything went fine until I had to restart. After the restart, I saw Grub – restart – I saw Grub again – restart – and so on. I booted again using the first FC3 CD (rescue linux) and typed in "grub-install /dev/hda". Now I have Fedora and Floppy in Grub, but no Windows. And my computer does not have a floppy-drive ;)

Now I want to delete the floppy-drive and add Windows, but how? Is there a graphical configuration-possibility in FC3? Or what file do I have to edit?

(Sorry for my bad english ;))

Best regards,
Sebastian
