Apparently it can't find "uncompress" – any way to get around this? Some package I'm missing? The "file corrupt" error seems to be a red herring, I downloaded the file a couple times. I don't believe it's corrupt.

Any help greatly appreciated!

```
gzip: /tmp/install.dir.2470/Linux/resource/vm.tar.Z: corrupt input. Use zcat
to recover some data.
```

```
./coldfusion-70-lin.bin: line 569: uncompress: command not found
```

```
gzip: /tmp/install.dir.2470/Linux/resource/vm.tar.Z: corrupt input. Use zcat
to recover some data.
```

The included VM could not be uncompressed (GZIP/UNCOMPRESS). Please try to download the installer again and make sure that you download using 'binary' mode. Please do not attempt to install this currently downloaded copy.
