I am trying to install Net-SNMP on my RedHat Machine.

While installing I got Failed Dependency message for beecrypt. I downloaded the same and tried installing that. Now I am getting Failed Dependencies message as shown below. What should I do.

```
rpm -ivh beecrypt-4.1.2-8.i386.rpm
warning: beecrypt-4.1.2-8.i386.rpm: V3 DSA signature: NOKEY, key ID
9b3c94f4
error: Failed dependencies:
libc.so.6(GLIBC_2.3.4) is needed by beecrypt-4.1.2-8
libstdc++.so.6 is needed by beecrypt-4.1.2-8
libstdc++.so.6(CXXABI_1.3) is needed by beecrypt-4.1.2-8
libstdc++.so.6(GLIBCXX_3.4) is needed by beecrypt-4.1.2-8
```

yum -y install beecrypt*

If your version does not have yum upgrade to one that does. Dependency hell is a thing of the past.
