Hi:

I'm looking for a script to monitoring CPU usage in red Hat.
Today I use a tool named sysperfstat in Solaris, and I'm looking for anything like this:

```
linux> sysperfstat 3
----- Utilisation ----- Saturation -----
Time %CPU %Mem %Disk %Net CPU Mem Disk Net
11:45:12 1.81 35.01 0.46 0.03 0.00 0.00 0.00 0.00
11:45:15 1.33 35.02 0.00 0.00 0.00 0.00 0.00 0.00
11:45:18 4.65 35.02 0.68 0.00 0.00 0.00 0.00 0.00
.
```
